

BERAT DOĞAN

Cloud / DevOps / Platform Engineering Intern

Elazığ, Turkey • +90 555 099 04 59 • dgan.berat@gmail.com

linkedin.com/in/beratdgan • github.com/BeratDgan

HIGHLIGHT REEL

- DevOps Engineer Intern at Soliner (Jul 2026 – Present), working on containers, CI/CD pipelines and cloud infrastructure.
- Hands-on AWS deployment experience with ECS Fargate, ECR, ALB, ACM, IAM, Secrets Manager, CloudWatch, EventBridge, SNS, and Cloudflare DNS.
- Containerized and deployed a production web application using Docker, GitHub Actions CI/CD, and AWS-managed infrastructure.
- Built operational practices around monitoring, alerting, logging, DNS/SSL, secret management, and structured production debugging.
- Backend and AI engineering background spanning Dockerized services, RAG systems, vector databases, OAuth integrations, and agile team leadership.

EXPERIENCE

Soliner — DevOps Engineer Intern

Jul 2026 – Present

- Working on the delivery side of production systems — containerization, CI/CD pipelines and cloud infrastructure.

TECHNICAL SKILLS

Cloud & DevOps: AWS ECS Fargate, ECR, EC2, S3, Lambda, IAM, VPC, ALB, ACM, Secrets Manager, CloudWatch, EventBridge, SNS; Docker, GitHub Actions, CI/CD, Linux, Cloudflare DNS

Backend: Node.js, TypeScript/JavaScript, Python, C#/.NET Core, REST APIs, WebSocket, OAuth 2.0

Databases: PostgreSQL, MongoDB, Redis, Qdrant, ChromaDB

AI / Data: RAG, LLMs, vector search, Selenium, data pipelines

Practices: Monitoring, logging, alerting, root cause analysis, Agile/Scrum

TECHNICAL PROJECTS

Trackruit — Job Application Tracking Platform — DevOps / Cloud Focus

Next.js, Supabase, Google Calendar API

- Containerized the application with a multi-stage Dockerfile, .dockerignore, build-time arguments, and standalone output configuration to create a reproducible cloud deployment artifact.
- Deployed Docker images to AWS ECS Fargate through ECR, configuring the cluster, task definition, service, CPU/memory, ports, environment variables, and CloudWatch logging.
- Configured ALB target groups, listeners, health checks, security groups, Cloudflare DNS, AWS ACM HTTPS, HTTP-to-HTTPS redirect, and Cloudflare Full SSL for secure production traffic.
- Built a GitHub Actions CI/CD pipeline to validate development branches and automatically build, push, and deploy Docker images to ECS on production merges.
- Hardened operations with IAM least-privilege deployment access, AWS Secrets Manager runtime secrets, CloudWatch alarms, SNS notifications, EventBridge task alerts, and structured root-cause debugging.

Tech: AWS ECS Fargate, ECR, ALB, ACM, IAM, Secrets Manager, CloudWatch, EventBridge, SNS, Cloudflare DNS, Docker, GitHub Actions

PrePath — AI-Powered Technical Interview Simulator — Technical Team Lead & Scrum Master | 2024–2025
Academic Project

- Led a 4-engineer agile team by translating product requirements into sprint plans, backend ownership boundaries, and integration checkpoints.
- Built a RAG backend with Qdrant and Dockerized services, indexing 40,000+ scraped records for semantic interview-question retrieval.

- Implemented service health checks and structured logging to support debugging, reliability reviews, and future cloud monitoring integration.
- Fine-tuned open-source LLMs with LoRA/QLoRA and automated data-processing workflows for interview-question extraction and ranking.

Lyricaly.tech — Spotify API Web Application — Backend Developer | Production Deployment 2024

- Built and deployed backend services for a production web application integrating Spotify OAuth 2.0, token handling, and user-facing API workflows.
- Managed release configuration, environment variables, secrets handling, API health monitoring, and rate-limit debugging to improve operational reliability.

Live Streaming Platform — Backend Developer | Personal Project 2024

- Architected a real-time Node.js and Socket.io backend with event-driven WebSocket flows for streaming sessions and connection state management.
- Added reconnect handling and structured event logging to support session continuity, production debugging, and root-cause analysis.

EDUCATION

Firat University

B.S. in Software Engineering (Expected 2027) • Elazığ, Turkey

- Relevant coursework: Cloud Solutions: AWS (AA), Algorithm Analysis (BA)

University of Maribor

Feb 2025 – Jul 2025

Erasmus+ Exchange — Computer Science • Maribor, Slovenia

- Relevant coursework: Algorithms and Data Structures (B)

CERTIFICATIONS

Cloud & DevOps: Getting Started with Serverless (AWS Educate); Intermediate Docker (DataCamp); Introduction to Docker & Kubernetes (DataCamp); Containerization & Virtualization Concepts (DataCamp); Linux 301 (Turkcell Geleceği Yazanlar)

Backend & Programming: Problem Solving (HackerRank); .NET Core Beginner Path (Patika.dev); Get Started with Redis (Redis University)

AI: Prompting Essentials (Google / Coursera, Jul 2025)

LANGUAGES

Turkish: Native **English:** B2 – Professional Working Proficiency
