SUMMARY

Software Engineering student with hands-on experience in Kubernetes, CI/CD and cloud deployments on Azure and AWS. Built an AKS-based internship project covering GitOps, monitoring, secret management and backups.

EXPERIENCE

Soliner | DevOps Engineer Intern | Jul 2026 - Present

- Worked on containerization and Kubernetes deployment configurations in a BSS environment.
- Built reusable Helm charts with health probes and environment-specific values; configured Istio routing and an 80/20 traffic split in a lab application.
- Set up Prometheus metrics, Grafana dashboards, Loki logs and Alertmanager email notifications for the AKS internship project; investigated deployment, networking and secret configuration issues.
- Gained exposure to the team's Jenkins, Argo CD, Bitbucket, Harbor and AWS EKS/ECR workflows.

TECHNICAL PROJECTS

Cloud Native Order Platform | Soliner Internship Project | 2026

- Provisioned Azure Kubernetes Service (AKS) infrastructure with Terraform; deployed Node.js services and PostgreSQL with persistent storage using Helm.
- Built GitHub Actions checks for tests, Helm validation and Trivy image scanning; published images to Azure Container Registry using OIDC and configured Argo CD to sync Git-managed deployments.
- Integrated Azure Key Vault with External Secrets Operator and Workload Identity; added NetworkPolicies and configured Istio-based canary delivery with Argo Rollouts.
- Configured HPA and recommendation-only VPA; used Velero with CSI snapshots and verified restored PostgreSQL data files in a separate namespace.

Trackruit | Job Application Tracking Platform

- Containerized a Next.js application and deployed it to AWS ECS Fargate through ECR, with ALB, ACM HTTPS and Cloudflare DNS; automated image builds and deployments with GitHub Actions.
- Configured IAM permissions, Secrets Manager, CloudWatch monitoring and SNS/EventBridge notifications.

PrePath | Technical Team Lead / Scrum Master | Academic Project | 2024 - 2025

- Led a four-person team and planned sprints; built a Dockerized RAG backend with Qdrant, indexed 40,000+ records and fine-tuned open-source models with LoRA/QLoRA.

TECHNICAL SKILLS

Cloud & Infrastructure: Azure (AKS, ACR, Key Vault), AWS (ECS, ECR, IAM, CloudWatch), Terraform, Linux

Containers & Delivery: Docker, Kubernetes, Helm, Istio, Git, GitHub Actions, Argo CD, Argo Rollouts

Operations & Security: Prometheus, Grafana, Loki, Alertmanager, Trivy, External Secrets Operator, Velero

Development & Data: Node.js, JavaScript, Python, C#/.NET Core, REST APIs, PostgreSQL, Redis, Qdrant

EDUCATION

Firat University | B.S. in Software Engineering | Expected 2027 | Elazığ, Turkey

University of Maribor | Erasmus+ Exchange, Computer Science | Feb 2025 - Jul 2025

COURSES & TRAINING

Kubernetes Temelleri (Udemy, Aug 2026) | Getting Started with Serverless (AWS Educate)

Docker & Kubernetes courses (DataCamp) | Linux 301 (Turkcell) | Get Started with Redis (Redis University)

Languages: Turkish (Native) | English (B2)
